NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the left is CTD-2105K18, 2000 bp overlap; the clone sequenced to the right is RP11-533K11, 2000 bp overlap. Actual start of this clone is at base position 141753 of CTD-2105K18; actual end is at base position 16829 of RP11-533K11. Polymorphisms have been identified between AC016444 and AC074390. Data from AC016444 was used to finish this clone, AC074390. On Jan 28, 2001 this sequence version replaced gi:12580980.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is annotated repeat sequence elements using the 'unsure' feature key.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
